PSA SINGAPORE

TRANSPORTATION NETWORK

PSA Singapore operates the world's largest transshipment hub. In 2025, it handled 44.5 million TEUs. Tuas Port was officially inaugurated on 1 Sep 2022, with the first set of berths operational at Phase One of the development. Functioning as one integrated facility, the City Terminals, Pasir Panjang Terminals and Tuas Port offer connections to 600 ports globally. This includes daily sailings to every major port in the world.

PSA Singapore also operates Pasir Panjang Automobile Terminal (PPAT), Sembawang Wharves (SW), Keppel Distripark (KD), and Jurong Island Terminal (JIT).

PPAT and SW handle vehicles and general cargo. In 2025, PPAT and SW handled 1,116,844 vehicles and 889,117 tonnes of general cargo.

KD facilities include a container freight station, warehouses, heavy vehicle and chassis parks. Supported by an on-dock depot in the vicinity, the distripark is located within the free trade zone, enabling efficient cargo handling and value-added logistics services. KD is also in close proximity to PSA's container terminals and has easy access to the airport and industrial hubs.

JIT is located in the western part of Jurong Island - the centrepiece of Singapore's energy and chemicals sector. The two berths at the terminal handle two barge sailings daily. JIT is fully integrated with the wider Tuas ecosystem, providing sustainable barging solutions that connect Jurong Island to global markets.

JIT offers Dangerous Goods (DG) handling facilities and a sheltered transloading area. These facilities support cargo transfer and value-added services, helping cargo owners manage their inventory and Container Detention and Demurrage charges. ■

Facilities (Container Terminals)

Container berths	56
Quay length (m)	21,288
Area (ha)	887
