FUZHOU CONTAINER TERMINALS

The Port of Fuzhou is located at the centre of Fujian's coastline along the Taiwan Straits, offering seamless rail and road connectivity to the hinterland to support industries across Southeastern China. PSA operates four container terminals in Fuzhou: Fuzhou Qingzhou Container Terminal (FQCT), Fuzhou International Container Terminal (FICT), Fujian Jiangyin International Container Terminal (FJCT) and Huafu (Fuzhou) Jiangyin Terminal Development (HFCT). The facilities are collectively managed under Fuzhou Container Terminals (FCT).

FCT Jiangyin, comprising FICT, FJCT and HFCT, holds concessions for a stretch of seven continuous linear berths at Jiangyin Port, spanning a combined length of 2,298 metres. Equipped with 16 quay cranes and a designed capacity of 4.2 million TEUs, the terminal supports mega vessels with a port depth of 17.5 metres, offering direct connections to the Americas, South Asia, and ASEAN.

FQCT specializes in direct shipping services between mainland China and Taiwan daily, along with weekly services to Hong Kong and Japan. It features three container berths with a total length of 519 metres, four quay cranes, and a designed capacity of 850,000 TEUs.

PSA Fuzhou is actively expanding port-adjacencies value-added services to complement the port for hinterland industries such as automobiles, cold chain and chemicals through Fujian PSA Cold Chain Supply Chain Solutions (PFS).

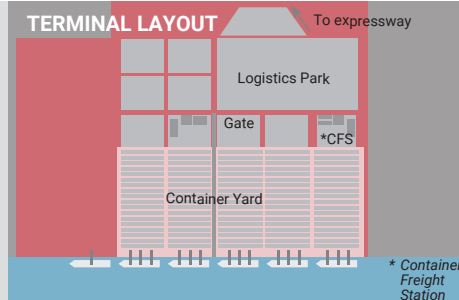

PSA Huilin Global Logistics (PHGL), the only licensed off-dock DG facility in Fuzhou, also served as an exclusive consolidation Port Adjacencies Flow Centre.

Complementing this, Fujian PSA Portnet (FPPN) develops solutions to digitalise and optimise port and logistical processes across the Fuzhou port ecosystem.

With PSA's trusted and aligned strategic partnerships with Fujian Port Group, PSA is jointly developing Fujian's port nodes to enhance connectivity within PSA's global network. ■
