PSA Chongqing is part of an industry consortia dedicated to developing multimodal transport and logistics solutions in Chongqing. This initiative falls under the third Sino-Singapore collaboration on connectivity development, which led to the formation of two joint venture entities – Sino-Singapore (Chongqing) Connectivity Solutions Co., Ltd. (SSCCS) and Sino-Singapore (Chongqing) DC Multimodal Logistics Co., Ltd. (SSCDC).

Strategically positioned within the largest multimodal logistics hub in Western China, both SSCCS and SSCDC are connected via transport services along the International Land-Sea Trade Corridor (ILSTC) and the China-Europe Trade Corridor. These entities complement PSA's existing network in China by offering value-added services, including physical storage and distribution, as well as digital solutions in freight booking and regulatory compliance.

These facilities are integrated within a multimodal logistics hub designed for cargo consolidation and distribution through river, rail, air, and road connectivity. Development is planned in two phases, with Phase 1 completed in May 2022. This phase includes a 40,000m<sup>2</sup> distribution centre, a 50,000m<sup>2</sup> container stacking yard, and a 35,000m<sup>2</sup> 5-storey office building. ■

| Facilities                    | Current | Planned |
|-------------------------------|---------|---------|
| Total facility area (ha)      | 16      | 35      |
| Warehouse area (ha)           | 4       | 18      |
| Container yard area (ha)      | 5       | 5       |
| Designed capacity ('000 TEUs) | 4       | 4       |
